

MANIFESTO · ENGLISH VERSION

QUARIC

A manifesto for *technological independence*

*A foundation for end to end technological independence,
from a past we respect to a future we prepare.*

*Twenty-three affirmations like twenty-three chromosomal pairs : a
complete identity code, readable on multiple levels, converging at every
point toward the same thing. Sovereignty. Independence.*

*Carried by Koperateur
Consulting*

PREAMBLE

This text is written at a moment when every tool we use belongs to someone else. When dependencies that should have remained technical have become political. When choices made by default are presented as freedoms.

QUARIC was born from this observation. Not yesterday. The project has existed for years, written, tested, proven. It carries verifiable results. It exists because the current situation exists. And because others like us see what it entails.

This manifesto is not political. It is not anti-technology. It is a manifesto of freedom. And of freedom alone.

I. THE OBSERVATION.**01 A dependency that can be cut is not a dependency. It is a leash.**

As long as the possibility of being cut off exists on a tool, the freedom it offers is conditional. As long as the condition belongs to someone else, autonomy is a fiction.

02 What is revoked by decree was never ours.

A revoked certificate, a suspended license, an extended sanction, a modified condition. These administrative gestures are enough to halt an economy. No product, however high-performing, deserves trust if it depends on the goodwill of a third party.

03 Free is not the enemy. The absence of choice is.

The fight is not against free. The fight is against lock-in. Choosing your bricks freely, being able to mix them, being able to leave without losing everything. That is freedom. Being forced into a single free option because nothing else exists is the exact opposite.

04 A technology that observes without being asked is not a technology. It is an apparatus.

Anything that watches by default, remembers by default, models by default. All of it was installed without our consent. The presence of an invisible observer in a tool is not a configuration detail. It is the very nature of the tool.

II. THE BRIDGE.

05 **QUARIC is the bridge between past, present, and future.**

Three eras that no solution has held together. Reading what has been written. Speaking what is written today. Preparing what comes next. No clean slate. No flight forward. A taut thread between the ages of software.

06 **The past is not waste. It is civic infrastructure.**

Forty years of banking, medical, administrative code that runs payrolls, pensions, healthcare, transactions. To despise that code is to despise those who depend on it. Respect for the past is a political act before being a technical one.

07 **The present must be spoken without a foreign accent.**

The common languages of critical systems are spoken in our compilers, our systems, our tools. Speaking them without depending on a single supplier is the condition for our voices to carry.

08 **The future must be prepared, not endured.**

What encrypts our data today is harvestable now. Computation changes scale. Any data not protected by cryptography adapted to the new scale is data already lost. This preparation happens at the heart of the tools, not as a cosmetic layer.

III. THE LIVING GRAMMAR.

09 **The living world has already solved what computing keeps rediscovering.**

How to isolate. How to protect. How to repair. How to regenerate. How to forget selectively. This biological grammar structures our approach. It has a name in our work. OrganicAsCode. A structural analogy, not a poetic metaphor.

10 **What sleeps is protected. What lives is served.**

The principle is ancient. The living world does not keep all its code accessible at every instant. It densifies what is not in use. It unfolds what must be used, at the precise moment it is needed. Our tools follow that discipline.

11 **Defense does not ask for permission.**

A reaction that asks a human's opinion on every known attack is not a defense. It is a ceremony. Fast determinism, memory of past threats, action without consultation for what is already identified. That is what the living world teaches.

12 **Transmission must be faithful, or it is not transmission at all.**

A system that reproduces itself must be able to prove that the copy is identical to the original. Not by human inspection. By mathematical certainty. Without this property, all subsequent trust is blind.

IV. THE REFUSALS.

13 **We do not want to control anyone.**

No interest in knowing who uses what. No interest in trading that information. No interest in storing it. A sovereign tool simply serves its user. No reporting. No syncing. No suggesting.

14 **No collection by default.**

No hidden telemetry. No mandatory cloud. No account required to run what runs on your own machine. Silence is the default value. Anything that goes out must have been requested.

15 **Technology has no calling to be militarized for the account of a state.**

Civic tools serve civic uses. What is built to heal, to account, to transmit, to archive, does not transform, under the pretext of urgency, into a tool of control. This line is not negotiable.

16 **Lock-in is a failure, never a feature.**

Any tool you cannot leave is a tool you are locked into. Any architecture that makes leaving costly turns loyalty into ransom. The exit door is the first sign of the freedom on offer.

V. THE COMMITMENTS.

17 **Coherence over time.**

QUARIC remains a directed project. Not an aggregate of orphan forks. Not a sum of diluted good intentions. A trajectory held straight, without compromise.

18 **Auditability without concession.**

Everything that must be verifiable is verifiable. By anyone who wants to. At any time. This requirement is stricter than open source alone. It articulates readability, public reading, and responsibility for the project's direction.

19 **Reading as citizenship.**

Read what you execute. Read what you sign. Read what authenticates you. This reading does not require everyone to become an engineer. It requires that no one be forced to accept blindly.

20 **Discipline as method.**

Technological independence is not a state one waits for. It is a discipline one practices. Brick by brick. Choice after choice. No haste. No slackening.

VI. THE CONVERGENCE.

21 **We are many.**

QUARIC is not an individual work. It is a collective. Years of work behind us. Code that passes the most demanding tests in the industry. A vision held straight, without compromise. And around it, a circle that grows.

22 **Those who advance in silence on the same path have a place among us.**

If other collectives are working toward the same independence, in other languages, on other bricks, in other countries, they are not our competitors. They are our allies. Stop fighting one another. Stop reinventing on each side what others have already solved. Unite the efforts.

23 **The shared march begins now.**

Read. Verify. Choose. Leave what imprisons you. Support what sets you free. Together, what seems impossible alone becomes practicable. And those who today live off the exploitation of our data depend on a human raw material. When that material ceases to be supplied, their model dissolves.

Final call.

We are looking to be more.

Engineers. Researchers. Jurists. Financiers. Software craftspeople. Institutions. Cooperatives. Associations. Dedicated minds. Everyone who shares the diagnosis and wants to take part has a place.

Koperateur Consulting carries this vision in its missions and in its conduct. QUARIC is its technical, philosophical, and civilizational extension.

Independence is not a slogan. It is a complete chain, from the first byte to the last interface. End to end, or nothing.

QUARIC traces this path.

Walk with us.
